Extra Sheet

Object Oriented Programming (1) Lab-Part 1

Basic

Write a Java program to convert minutes into a number of years and days.

Test Data
Input the number of minutes: 3456789
***Expected Output* :**
3456789 minutes is approximately 6 years and 210 days

Selection Statements

Write a Java program that takes the user to provide a single character from the alphabet. Print Vowel or Consonant, depending on the user input. If the user input is not a letter (between a and z or A and Z), or is a string of length > 1, print an error message.

Test Data
Input an alphabet: p
***Expected Output* :**
Input letter is Consonant

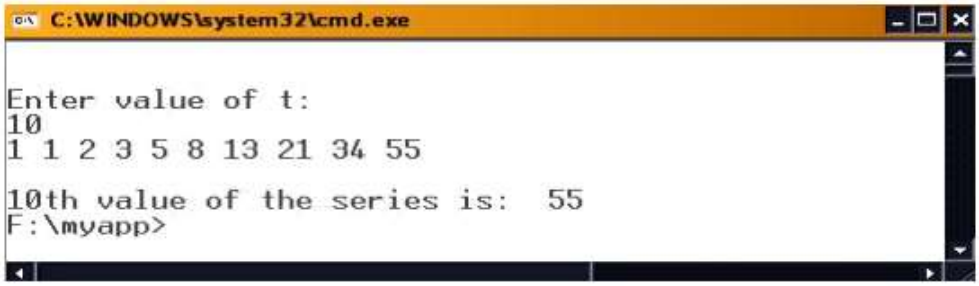
LOOP

Write a Java program to print the value of the Fibonacci sequence. The Fibonacci sequence for entered number from the user is defined by the following rule. The first 2 values in the sequence are 1, 1. Every subsequent value is the sum of the 2 values preceding it, the variable t from user represents the number of items within Fibonacci sequence.

Expected Input and output:

Enter the value of t: 5
1 1 2 3 5

Actual Input & Output :



Nested Loop

Write a program in Java to print the Floyd's Triangle.

Test Data
Input number of rows : 5
Expected Output **:**

```
1

01

101

0101

10101
```

Methods

Write a Java method to compute the sum of the digits in an integer.

Test Data:
Input an integer: 25
Expected Output:

```
The sum is 7
```
